Agricultural Statistics of India

1914-15

VOLUME I—BRITISH INDIA

Report

To

THE SECRETARY TO THE GOVERNMENT OF INDIA,
DEPARTMENT OF REVENUE AND AGRICULTURE.

SIR,

I have the honour to submit the first volume of Agricultural Statistics for 1914-15. This annual volume is the thirty-first of the series started in 1886, with statistics for 1884-85, but it should, perhaps be regarded as the third of a new series. Summary tables have been inserted to show the total figures relating to area, the classification of area, the area under crops, live-stock, land revenue assessment, and transfers of land for British India and each province, with a table on world crops. Explanatory notes have been inserted as footnotes to the tables. A series of charts and an index for easy reference have been added to the volume.

The statistics are compiled from annual returns furnished by Local Governments and Administrations. Detailed information as to the sources from which the figures are collected in the different provinces is given in footnotes to the respective tables for each province. The statistics consist of six separate tables, namely, I—Area; II—Classification of area; III—Area under crops; IV—Live-stock, ploughs, and carts; V—Land Revenue Assessment; and VI—Transfers of property in land. The totals of the figures given in these tables are shown in a series of summary tables. In addition to these there are four appendices:—A, B, C, and D. Appendix A deals with the average yield per acre of principal crops; Appendix B shows the changes made in district and provincial boundaries; Appendix C gives the meaning of vernacular words used in the volume; and Appendix D contains an alphabetical list of crops cultivated in India and their classification in Table III. This volume, it may be noted, deals with the agricultural statistics of British Provinces, while Volume II deals with those of Native States* as far as they are reported.

The period covered by the volume is the quinquennium ending 1914-15. The returns for each province relate to the following dates:—

Bengal, Bihar and Orissa, Assam, Coorg, and Manpur	Year ended 31st March
Central Provinces and Berar	„ 31st May
North-West Frontier Province	„ 15th June
United Provinces, Madras, Burma, and Ajmer-Merwara	„ 30th „
Bombay	„ 31st July
Punjab and Delhi	„ 30th September

It may be noted that the statistics relating to areas irrigated (Table II) and areas under crops and specification of crops (Table III) generally include both the *kharif* and the *rabi* crops, and relate to the year closing with the harvesting of the *rabi* or spring crops.

* In Appendix A (Volume I), however, figures relating to Mysore are included.

The total area of India is 1,799,000 square miles, or 1,151,474,000 acres, with a population of 315 millions according to the census of 1911. This may be divided as follows :—

	Acres.	Population.
(1) British Provinces (including Native States under the control of Local Governments and Administrations) .	749,116,000	267,161,000
(2) Native States having direct political relations with the Government of India	316,387,000	44,767,000
(3) Specially administered territories in Burma (Shan States) and in the North-West Frontier Province (Tribal areas, etc.) not included under (1)	51,265,000	2,738,000
(4) British Baluchistan (including administered areas)	34,706,000	411,000
Total	1,151,471,000	315,083,000

No returns of agricultural statistics are prepared for (3) specially administered territories in Burma and in the North-West Frontier Province, nor for (4) British Baluchistan.

to I.
al area.

The total area of the British Provinces dealt with in this volume—749,116,000 acres, or 1,170,000 square miles—includes 129,724,000 acres, with a population of some 26 millions, belonging to Feudatory and Tributary States, which are under the control of Local Governments and Administrations. These include in Burma the Mōngmit State, the Mkamte Long State, and the Upper Chindwin States; in Assam, Manipur and the Khasi and Jaintia Hill States; in Bengal, Cooch Bihar and Hill Tippera; in Bihar and Orissa, the Tributary States of Orissa and Chota Nagpur; in the United Provinces, Rampur, Tehri, and Benares; in the Punjab, the Phulkian States, the States of the Bahawalpur Agency, the Jalandhar Division States, and the Simla Hill States; in the North-West Frontier Province, the Phulera and Upper Tanawal States; in Sind, the Khairpur State; in Bombay, the Gujarat States (excluding Baroda), the Konkan States, the Deccan States, the Satara Jagirs, and the Southern Mahratta States; in the Central Provinces, the Chhattisgarh States; and in Madras, the States of Travancore, Cochin, Pudukkottai, Banganapalle, and Sandur. Of these States, Agricultural Statistics are prepared for most of the States in the Punjab and all the States in Madras; but they are dealt with in Volume II along with the States having direct political relations with the Government of India.

Thus, by deducting 129,724,000 acres belonging to Feudatory and Tributary States from the total area of 749,116,000 acres included in British Provinces, a balance of 619,392,000 acres is left (as shown in Table I), which represents the area of British territory according to professional survey. The professional survey is that carried out by the Survey of India in Northern India, and by the corresponding departments in the Southern Presidencies. The Agricultural Statistics are, however, prepared in a number of provinces or parts of provinces from "village papers", *i.e.*, papers prepared by the village accountants for the purposes of assessment and collection of land revenue. The area given in the village papers of the United Provinces, the Central Provinces and Berar, Madras, the Punjab, and the North-West Frontier Province differs to some extent from the area ascertained by professional survey. The causes of this difference are: (a) while the survey area of a district or province is calculated in block, the area by village papers represents the added total of field and village areas; and (b) the system followed as regards the inclusion or exclusion of areas covered by water, buildings, roads, and rail roads, is not uniform in the two sets of returns. Substituting the area by village papers for the area by survey in respect of provinces and tracts where the two sets of returns differ, the actual area of British territory for which statistics are given in this volume is 616,950,000 acres, or 964,000 square miles, as against 619,392,000 acres or 968,000 square miles according to the professional survey.

This area is classified, for the purposes of Agricultural Statistics, as shown in the margin. About

Classification area
82,935,000 acres, or 13 per cent of the total, are occupied by forests; and the area not available for cultivation, i.e., land absolutely barren or unculturable or covered by build-

ings, water, and roads, or otherwise appropriated to uses other than agriculture, amounts to 145,427,000 acres or 24 per cent. The balance, 388,588,000 acres or 63 per cent, represents the area available for cultivation. Of this, 115,080,000 acres, or 19 per cent of the total area, represent culturable waste other than fallow, i.e., land available for cultivation but not taken up, and 45,897,000 acres, or 7 per cent, were kept fallow in the year of report. The net area actually cropped in the year was therefore 227,611,000 acres, or

as against 219,192,000 acres in the preceding year. The proportion of cropped to total area and the number of population per 100 acres of cropped area in each province are stated in the margin. The proportion of cropped to total area in the year of report was highest in Delhi and lowest in Burma. This net cropped area of 227,611,000 acres, however, excludes areas cropped more

than once in the year. If areas cropped more than once are taken as separate areas for each crop, the gross area cropped in the year of report amounts to 260,641,000 acres, as against 246,989,000 acres in the preceding year.

The term "forests" in the returns of Agricultural Statistics means "any land classed or administered as forest under any legal enactment dealing with forests." Any cultivated areas existing within such forests may, however, be excluded, and entered in the column "net area cropped". The forest areas returned in the Agricultural Statistics do not agree in most cases with those stated in the reports on the administration of the Forest Department for various reasons,* the chief amongst which are the following:—(1) the forest administration reports and the returns of agricultural statistics relate in many cases to different periods; (2) the administration reports relate exclusively to forests worked by the Forest Department, while the tables of agricultural statistics exhibit, in addition, forest areas administered by district officers; and (3) certain village lands worked by the Forest Department and returned as forest lands by that Department are not treated as forests in the returns of agricultural statistics but are included under the proper heads of cultivated or uncultivated lands as the case may be. Of the total forest area returned in the agricultural statistics (82,935,000 acres in 1914-15), 24 per cent lies in Burma, 20 per cent in the Central Provinces and Berar, 16 per cent in the Madras Presidency, 11 per cent in the United Provinces, 10 per cent in the Bombay Presidency, and the remaining 19 per cent in other provinces.

As can naturally be expected, most of the barren and unculturable lands lie in the hilly tracts of Burma and of southern India and in the dry and deserty regions of north-western India. Of the total area "not available for cultivation" (145,427,000 acres in 1914-15), about 31 per cent lies in Burma, 15 per cent in the Madras Presidency, and 9 per cent each in Sind and the Punjab.

The head "culturable waste other than fallow" shows lands available for cultivation but not taken up. It includes areas such as groves not classed in the cropped area, and areas under bamboos and thatching grass when not forming parts of forest areas.* Of the total culturable waste lands

* For detailed explanations of differences in respect of provinces, see notes at foot of Table II, Nos. 26 to 49.

(115,080,000 acres in 1914-15), 22 per cent is in Burma, 15 per cent in the Punjab, 13 per cent in Assam, 12 per cent in the Central Provinces and Berar, 9 per cent in the Madras Presidency, and the remaining 29 per cent in the other provinces.

nt fallows.

The maximum period for which land left uncultivated is reckoned as fallow varies in the different provinces, from two years in the Punjab and the North-West Frontier Province to ten years in the Bombay Presidency, according to local laws and customs. After this period the land, if still left uncultivated, is treated as abandoned and included under the head "culturable waste". Owing to this diversity of practice, the classification as between "culturable waste" and "current fallows" is of doubtful statistical accuracy; a plot of land, for instance, left uncultivated for, say, six years, would be treated as fallow in the Bombay Presidency but as culturable waste in the Punjab. The total area returned as "current fallow" in 1914-15 was 45,897,000 acres, as against 52,620,000 acres in the preceding year, or a decrease of 13 per cent.

tion.

The total area irrigated in 1914-15 was 47,194,000 acres, as against 46,836,000 acres in the preceding year. Of this area, 18,887,000 acres were irrigated from Government canals, 2,497,000 acres from private canals, 6,944,000 acres from tanks, 12,556,000 acres from wells, and 6,310,000 acres from other sources of irrigation. In India irrigation on an extensive scale is ordinarily resorted to in tracts where the rainfall is most precarious. In Lower Burma, Assam, Eastern Bengal, and the Malabar Coast (including the Konkan),

where the rainfall is ordinarily heavy, the crops hardly need the help of irrigation, unless there is an unusual scarcity of rain. Of the total area irrigated in 1914-15, 24 per cent was in the Punjab, 21 per cent in the Madras Presidency, 24 per cent in the United Provinces, 10 per cent in Bihar and Orissa, 8 per cent in Sind, and the remaining 13 per cent in the other provinces. The proportion of irrigated to total cropped area in each province is stated in the margin. The proportion is

highest in the driest province of Sind.

The figures in the preceding paragraph do not take into account areas cropped more than once during the year with the help of irrigation, but indicate the extent of land actually irrigated. Counting areas cropped more than once as separate areas for each crop, the gross area of irrigated crops was 50,608,000 acres in 1914-15, as against 50,562,000 acres in the preceding year. Of this area, 42,711,000 acres, or 84 per cent, were under food crops, and 7,897,000 acres, or 16 per cent, under non-food crops. Of the irrigated food-crop area, 10,119,000 acres were cropped with wheat, 28,863,000 acres with other cereals and pulses, and 3,729,000 acres with other food crops. These statistics of irrigated crops are in some cases defective as explained in the notes at the foot of Table II (pages 46-49).

III.
under crops.

The areas cultivated with the different crops represent the areas actually sown, whether the crop comes to maturity or not, except in cases where fields, owing to the failure of the first sowings, have been devoted to other crops; in such cases the area first sown is omitted. In cases where two or more crops are grown together on the same field, an estimate is made of the area covered by each, and the areas so estimated are separately returned under the respective crop headings. The estimate is made by the village accountant, or is subsequently determined on formulæ prescribed by the provincial authorities. In certain tracts, where the village staff does not exist, estimates are made on the best available information. An exception to the above rule is, however, made in the United Provinces, where the area sown with unimportant mixed crops, for which no separate heading is provided in the provincial crop statements, is assigned to the principal crops by the village accountant. In the same

province this procedure is also followed in the case of oilseeds thinly sown in combination with food-grains; in this case the whole area of the mixed field is assigned to food grains.

The gross area cultivated with crops was, as stated above, 260 million acres in 1914-15 as against 247 million acres in the preceding year, or an increase of 13 million acres or 5 per cent. The different classes of crops and the area occupied by each are stated in the margin.

food-crops occupied about 215,164,000 acres or 83 per cent, and non-food crops about 45,007,000 acres or 17 per cent. Of the food-crops, food-grains (cereals and pulses) occupied as much as 204,505,000 acres or about 79 per cent of the total cropped area, and other food-crops (condiments and spices, sugar, fruits and vegetables, and miscellaneous food-crops * together) occupied some 10,659,000 acres or only 4 per cent of the total. Of non-food crops, fibres, such as cotton, jute, hemp, etc., occupied 19,507,000 acres or 7 per cent of the total cropped area, and oilseeds occupied 15,333,000 acres or 6 per cent. The other non-food crops *—dyes, drugs and narcotics (tobacco, tea, coffee, opium, etc.), fodder crops, and miscellaneous non-food crops together—occupied some 10,167,000 acres or about 4 per cent of the total.

The area under food-grains (204,505,000 acres) showed a net increase of 12,932,000 acres or 7 per cent as compared with the preceding year. The

actual increase or decrease under each kind of grain is stated in the marginal table (in thousands of acres). It will be seen that the area under all the grains except jawar and ragi showed an increase. The weather conditions at sowing time were, on the whole, favourable, especially for the *rabi* crops (wheat, barley, gram, etc.). Of the total area shown in the table under food-grains (205 million acres in 1914-15), 19 per cent was in the United Provinces, † 15 per cent in the Madras Presidency, 13 per cent in Bihar and Orissa, 12 per cent in the Punjab, 11 per cent in Bengal, 10 per cent in the Bombay Presidency, 9 per cent in the Central Provinces and Berar, and the remaining 11 per cent in the other provinces.

The area under oilseeds (15,333,000 acres) showed an increase of 675,000 acres or 5 per cent as compared with the preceding year. The actual increase

The area included under food-grains, which was really sown with oilseeds (as a mixed crop), is roughly estimated to have been 4,000,000 acres in the whole province in 1914-15. The total area under condiments and spices in 1914-15 was 1,323,000 acres, as against 1,288,000 acres in the preceding year, or an increase of 35,000 acres or 3 per cent. As is to be expected, spices are grown mostly in the southern parts of India: nearly half (46 per cent) of the total area under condiments and spices in 1914-15 was in the Madras Presidency.

The total area under sugar in 1914-15 was 2,459,000 acres as against 2,708,000 acres in the preceding year, or a decrease of 249,000 acres or 9 per cent. Of this area, about 2,303,000 acres were occupied by sugarcane, as against 2,542,000 acres occupied by that crop in the preceding year, or a decrease of 9 per cent, which was due partly to deficient moisture in the soil at sowing time and partly to scarcity of seed-cane owing to the drought of 1913. More than half (52 per cent) of the sugarcane area was in the United Provinces, 16 per cent in the Punjab, 12 per cent in Bihar and Orissa, 10 per cent in Bengal, and 3 per cent in the Madras Presidency. The other sugar-yielding plants, namely, date palm and palmyra palm, occupied a total area of 156,000 acres as against 166,000 acres in the preceding year. About 47 per cent of this area was in the Madras Presidency and 37 per cent in Bengal.

Fibre crops occupied 19,507,000 acres in 1914-15 as against 19,895,000 acres in the preceding year, or a decrease of 388,000 acres or 2 per cent. The actual increase or decrease under the several kinds of fibre is shown in the

Presidency, 14 per cent in the Madras Presidency, 11 per cent in the Punjab, and 10 per cent in the United Provinces. The area under jute showed an increase of 173,000 acres or 6 per cent. About 87 per cent of the total jute area was in Bengal and the remaining 13 per cent in Bihar and Orissa and Assam. Other fibres also showed an increase of 61,000 acres or about 7 per cent as compared with the preceding year.

The total area under dyes was 601,000 acres in 1914-15. Of this, the area occupied by indigo was 146,000 acres as against 169,000 acres in the preceding year, or a decrease of 23,000 acres or 14 per cent. Of the total indigo area, 49 per cent was in the Madras Presidency, 26 per cent in Bihar and Orissa, 14 per cent in the Punjab, and 8 per cent in the United Provinces. Other dyes occupied an aggregate area of 455,000 acres.

ugs and narcotics

The total area under drugs and narcotics was 2,016,000 acres in 1914-15 as against 1,949,000 acres in the preceding year. The actual increase under each

kind of drugs and narcotics is stated in the margin. All drugs and narcotics except Cinchona and Indian hemp showed an increase, while the area under the latter two remained practically the same as in the preceding year.

* The figures shown under the several heads of oilseeds in Table III against the United Provinces of Agra and Oudh represent areas under "pure" oilseeds, i.e., oilseeds sown unmixed with any other crop, excluding the oilseeds which are thinly sown in combination with wheat, barley, gram, and other crops. If the areas occupied by the scattered oilseeds plants were added up, it is estimated very roughly that they would amount in 1914-15 for the whole of the United Provinces to about 4 million acres. Including this area, the total area under oilseeds in British India in 1914-15 would come to 19 million acres instead of 15 million acres stated above.

The head "fodder crops" shows only those crops which are used exclusively as fodder in normal times. These are oats, field vetch, guinea grass, lucerne, fodder jawar, and carob or locust tree. The total area under fodder crops in 1914-15 was 6,363,000 acres as against 5,910,000 acres in the preceding year. Fodder crops.

The total area occupied by fruits and vegetable crops in 1914-15 was 5,931,000 acres as against 5,721,000 acres in the preceding year. [For the names of the fruits and vegetable crops cultivated in India, see Appendix D.] Fruits and vegetables including root crops.

The total area occupied by miscellaneous crops, that is, crops not classified under any of the heads specified above, was 2,103,000 acres. Of this, about 946,000 acres were occupied by miscellaneous food crops and about 1,157,000 acres by miscellaneous non-food crops. [For the names of the crops included under these heads, see footnotes on page 119 and Appendix D.] Miscellaneous crops.

The total extent of land on which more than one crop was raised during the year was 33,030,000 acres as against 27,797,000 acres in the preceding year. Area cropped more than once.

The statistics recorded in Table IV are based mainly on cattle censuses. In Burma, Manpur Pargana, and the Central Provinces and Berar the census is taken annually, while in the United Provinces, Assam, Ajmer-Merwara, the Punjab, the North-West Frontier Province, the Bombay Presidency, the Madras Presidency, and Coorg it is taken once in five years. The last quinquennial census was taken in 1909-10 in the Bombay Presidency, in 1913-14 in the Punjab, the North-West Frontier Province, Delhi, and Ajmer-Merwara, and in 1914-15 in the United Provinces, the Madras Presidency, Assam, and Coorg. In Bengal a cattle census was taken for the first time in 1912-13, which gave the numbers of bulls and bullocks, cows, buffaloes, and young stock. [Young stock represents oxen and buffaloes not old enough for work or to produce young.] In Bihar and Orissa a census was taken in 1913-14. The figures for Bihar and Orissa prior to 1913-14, as also those for Bengal for years prior to 1912-13, are based on estimates. Live-stock in cities and cantonments are included wherever it is possible to secure their enumeration. In making up the totals for British India for each year, the figures last collected in the provinces, where the census is not taken annually, are repeated year after year until the next census is taken*. It would, therefore, serve no useful purpose to compare the total figures of one year with those of another, as the totals thus constituted do not really represent the number of stock in the year against which the figures are shown in the table. The animals may be divided into three classes, namely, (1) Bovine, comprising bulls and bullocks, cows, buffaloes, and young stock (*i.e.*, calves and buffalo calves), (2) Ovine, comprising sheep and goats, and (3) others, comprising horses and ponies, mules, donkeys, and camels. The total number of live-stock of each of these three classes in each province, together with the numbers of ploughs and carts, is stated in the margin (in thousands). Of the total number of live-stock of the bovine class (147 millions), which is cattle proper, the United Provinces account for 22 per cent, Bengal 17 per cent, the Madras Presidency 15 per cent, Bihar and Orissa 14 per cent, the Punjab 11 per cent, the Central Provinces and Berar 8 per cent, the

Bombay Presidency including Sind 7 per cent, and other provinces the remaining 6 per cent. In the case of ploughs also the United Provinces come first with 27 per cent of the total (excluding Bengal for which figures are not available), followed by Madras (22 per cent), Bihar and Orissa (17 per cent),

* It has been arranged to hold a quinquennial census of live-stock in the same year in all the provinces, as far as practicable. The next such census will be taken in 1919-20.

and the Punjab (12 per cent). In the case of stock of the ovine class (sheep and goats), however, Madras accounts for 32 per cent of the total (excluding Bengal), followed by the United Provinces (22 per cent), the Punjab (16 per cent), Bihar and Orissa (12 per cent), and the Bombay Presidency including Sind (10 per cent). In the case of carts also, Madras accounts for 21 per cent of the total (excluding Bengal), followed by the Central Provinces and Berar

(19 per cent), the United Provinces (18 per cent), and Burma (11 per cent). The marginal table shows the number of live-stock of the bovine class (which is cattle proper) per 100 acres of cropped area and per 100 of the population of each province. It will be seen that the number of cattle per 100 acres of cropped area ranges between 32 in Bombay and Sind and 100 in Bengal, while the number per 100 of population ranges between 36 in Delhi and 95 in the Manipur Pargana. The average for British India, as a whole, is 65 per 100 acres of cropped area and 61 per 100 of the population.

Table V.
Land Revenue
Assessment.

The varieties of land tenure in the different provinces are included in Table V and are given, as far as possible, under one or other of the following three heads, namely, (1) *raiyatwari*, (2) *zamindari* and village communities (temporarily settled), and (3) *zamindari* permanently settled. When the revenue is assessed by the State, permanently or temporarily, on an individual or community owning an estate, and occupying a position identical with or analogous to that of a landlord, the tenure is known as *zamindari* or village community; when the revenue is assessed on individuals who are the actual occupants, or are accepted as representing the occupants, of smaller holdings, the tenure is known as *raiyatwari*. Under either system there may be rent-paying subtenants. *Zamindari* tenure may be either *permanently settled*, i.e., where the land revenue has been fixed in perpetuity, or *temporarily settled*, i.e., where the land revenue is fixed for a period of years only. Village communities and *raiyatwari* tenures are as a rule temporarily settled, and the land revenue assessed on them are changeable from time to time.

The following table shows the position in the surveyed areas of the various provinces, as regards the forms of land tenure according to the latest statistics available. The figures roughly indicate the extent to which the different systems prevail :—

Total	295,689	122,961	201,032	619,682

It will thus be seen that about 48 per cent of the total area is held by *raiyatwari* proprietors, while 20 per cent is held by permanently settled, and 32 per cent by temporarily settled, *zamindari* proprietors.

* Including Government forests.

The statistics for this table are collected annually in Burma, Assam, Manipur, the Punjab, Delhi, the North-West Frontier Province, and the Central Provinces and Berar, and quinquennially in Bengal, Bihar and Orissa, the United Provinces, Ajmer-Merwara, Bombay, Sind, Madras, and Coorg. (excluding cesses) for the whole of British India amounts to over Rs 33½ crores. This represents the actual realisable demand* on account of the year, no account being taken of the collection of arrears for past years, nor of amounts remaining uncollected at the end of the year. The marginal table shows the total land revenue assessment, the total population, and the assessment per head of population in each province. For additional details reference should be made to the tables on pages 278 to 319.

The total number of transfers during 1914-15, as recorded in Table VI, was 917,000, of which 895,600 were by private contract or gift, and 21,400 by order of the court. The total area of the transfers by private contract or gift was 4,414,900 acres, and by order of the court 450,200 acres. These statistics are incomplete. They do not include transfers in Bengal (for which figures are not available), nor in Madras (for which the table has been discontinued from 1913-14); in Bihar and Orissa no information is available regarding transfers under orders of civil courts. As explained in the footnotes to Table VI, the figures for other provinces also are not always complete. It may be noted that voluntary transfers are those made by actual contract or gift, transfers by succession or inheritance not being taken into account; compulsory transfers are those effected through a court, civil or revenue. Transfers of land under the Land Acquisition Act and temporary transfers, such as leases, simple mortgages, and redemptions of mortgages, are excluded from the table. Mortgages with possession are treated as transfers and included in Table VI.

Table VI.
Transfers of property
in land.

The Agricultural Department in each province maintains a statement of the average yield per acre of land of average quality, irrigated and unirrigated, for crops in each district. In order to test the accuracy of the standards of normal or average yield, and if necessary, to revise these, a system of crop-cutting experiments exists in all the provinces. Under this system plots of land of average quality are selected, and the crops grown on them are cut and weighed in the presence of responsible officers of the district staff or of the provincial agricultural department. The results of the experiments are reported to the head of the provincial agricultural department, who revises the standards in the light of these returns. This revision is ordinarily made once in five years, although crop-cutting experiments are usually carried out for the principal crops each year. The table (appendix A) shows the figures as last revised with reference to the crop-cutting experiments made up to 1911-12. As time goes on the figures become more accurate, and it may be noted that the general trend of the changes made is in an upward direction. In Bengal the yield of sugarcane has been raised from 2,460 lbs to 2,905 lbs, and that of jute from 1,200 lbs to 1,271 lbs. Maize and rice in the United Provinces have been raised from 1,050 lbs and 850 lbs to 1,100 lbs and 900 lbs, respectively. In the Punjab rapeseed has been raised from 254 lbs to 396 lbs and cotton from 74 lbs to 118 lbs. In Sind cotton has been raised from 308 lbs to 380 lbs, due

* Sums remitted on account of unoccupied lands, short crops, etc., are wholly excluded from this total amount in Madras, the North-West Frontier Province, Sind, and Burma; while such remissions only as are actually sanctioned within the year of report are excluded in the Central Provinces and Berar, the United Provinces, Bombay, and the Punjab. No deduction for remissions is made in Bengal, Bihar and Orissa, Assam, Ajmer-Merwara, Coorg, and Manipur.

mainly to the adoption of Egyptian seed in Thar and Parkar, and bajra from 776 lbs to 971 lbs. In Madras irrigated and unirrigated cotton is, respectively, 87 lbs and 55 lbs against 66 lbs and 44 lbs formerly, while irrigated jawar has been raised from 1,118 lbs to 1,379 lbs. In some instances the standards have decreased. In Bengal the average yield of winter rice has been put at 983 lbs; in the Punjab the yield of bajra at 379 lbs and of gram at 549 lbs; while the yield of maize in the North-West Frontier Province is now estimated at 1,292 lbs.

Territorial changes.

Appendices B, C, and D perhaps require little or no comment. Appendix B, which shows changes that have been made from time to time in district or provincial boundaries, will explain the variations in total areas of districts and provinces in Table I, so far as they are due to territorial changes. Appendix C explains vernacular terms used in this volume, and Appendix D the classification in Table III of the various crops cultivated in India.

Vernacular terms and classification of crops.

The charts and diagrams in the volume illustrate (1) total area cropped in 1914-15 with shares of food and non-food crops, (2) live-stock divided between bovine, ovine, and others, (3) total cultivable area, (4) uncultivable area and net area cropped, (5) culturable waste and current fallows, (6) area cropped and area under food crops, (7) area under non-food crops and irrigated area cropped, (8) and (9) areas under selected crops, (10) areas under selected crops in 1914-15 as compared with those in 1910-11, (11) shares of provinces in the areas under certain principal crops in 1914-15.

For the prices of agricultural produce, reference should be made to the volume entitled "Prices and Wages in India", 32nd issue, which has been recently published.

(a) Figures for Lower Egypt only

(b) Not including the territory occupied by the enemy

(c) Excluding Croatia-Slavonia

(d) Winter barley only

(e) Excluding the Isle of Man and the Channel Islands

(f) Excluding 4,234,000 acres where the winter wheat crop was destroyed

* Including figures for Native States, namely, 2,380,000 acres for rice, 7,190,000 acres for wheat, 938,000 acres for barley, 1,429,000 acres for maize, and 9,470,000 acres for cotton. The figures for rice, barley, and maize for Native States are, however, not complete, as returns for those crops are not furnished by a number of States.

Note.—The figures for foreign countries have been taken from the Bulletins of Agricultural and Commercial Statistics and local Notes on Cereals published by the International Institute of Agriculture, Rome.

Column 2.—The professional survey is that carried out by the Survey of India in Northern India, and by the corresponding departments in the Southern Presidencies. The provincial areas in this column exclude Native States in direct political relations with the Government of India, but include Feudatory or Tributary States politically controlled by Local Governments, with the exception of the Shan States in Burma and the Tribal areas in the North-West Frontier Province.

Column 3.—In this column is entered the area of any Feudatory or Tributary States included in column 2.

Column 4.—Prior to 1908-09 this column showed the entire area (exclusive of Native States) for which the statistics required for Tables II and III were not forthcoming in whole or in part. This area comprised chiefly estates held in permanent settlement or on privileged tenure, which were not surveyed or which possessed no agency for the annual collection of agricultural statistics. But arrangements have since been made to procure statistics, for the whole of this area, based either on regular returns or on estimates as has been found practicable. There is therefore no longer any unreturned area to be shown in this column.

Columns 5 and 6.—Column 5 is a check on the accuracy of column 6. In the latter "village papers" mean "the papers prepared by the village accountants." The village papers do not in several provinces relate to the whole area included in column 5; for instance, the village returns sometimes do not include the forest areas. There are also tracts in many provinces for which no village papers exist and for which estimates have to be made to complete the statistics. In all such cases, column 6 must be taken to be the total area corrected by the village papers in respect of the areas for which such papers exist. The areas of provinces and districts, which are calculated from village papers, are necessarily somewhat different from those given by the Survey Department, (a) because, while the survey area of a district or province is calculated in block, the area by village papers represents the added total of field and village areas; and (b) because the system followed as regards the inclusion or exclusion of areas covered by water, buildings, roads, and railroads, is not uniform in the two sets of returns. In provinces where no village papers exist, the figures in column 5 have been repeated in column 6. In that case they represent the area of which the details are stated in columns 2 to 6 of Table II.

Note.—(1) The variations in the figures for 1912-13 for certain districts are due to adoption of the latest census figures. The area cadastrally surveyed up to 1914-15 comprises 18,755,874 acres or about 42 per cent of the total area of the province (exclusive of Native States). The figures for the remaining area of the province are based more or less on estimates.

(2) For explanations of all material changes in area according to professional survey, in this as well as in the succeeding sections of Table I, reference is invited to the table stating changes made in boundaries, Appendix P.

Column 2 states the area as ascertained by the provincial survey department, supplemented, for tracts which have not come under the operations of that department, by areas obtained with the computing scale from the Survey of India atlas sheets of the localities concerned.

Columns 5 and 6.—The statistics for the major portion of the zamindari estates and certain raiyatwari and whole inam villages are based on estimates owing to the absence of adequate agency for the collection of statistics in these tracts. Of the total area (89,451,125 acres) entered in column 6 for 1914-15 (page 20), 66,708,466 are based on actual returns and 22,782,669 on estimates.

Column 2 states the area as returned by the provincial revenue survey and settlement department, supplemented in the case of Native States by the returns of the topographical survey.

Columns 5 and 6.—The figures of column 5 are repeated in column 6, because the areas in village papers are derived from the revenue survey records. The figures for all unsurveyed villages are based on estimates. Of the total area (48,613,958 acres) entered in columns 5 and 6 for 1914-15 (page 22), 41,520,201 acres are based on actual returns and 4,123,757 acres on estimates.

(a) Constructed in 1912-13 out of the Hyderabad and Thar and Parker districts

Column 2 states the area as returned by the provincial revenue survey and settlement department, supplemented in the case of Native States by the returns of the topographical survey. The revenue survey being incomplete in Sind, the exact area is not known: the column states the area of surveyed tracts *plus* the estimated area of unsurveyed tracts

Columns 5 and 6.—The figures of column 5 are repeated in column 6, because the areas in village papers are derived from the revenue survey records. The figures for all unsurveyed villages are based on estimates. Of the total area (30,089,084 acres) entered in these columns for 1914-15, 29,964,176 acres are based on actual returns and 124,908 acres on estimates

(a) Rampore, Tehri, and Benares. In 1910-11 the area of the Family Domains of the Maharaja of Benares situated in the Mirzapur district was constituted as the State of Benares. This area has therefore been excluded from that year from the area of the Mirzapur district and included under the head "Feudatory and Tributary States not included in the area of any British district." The portion of the Maharaja's domains situated in the Benares district remains British Territory.

Columns 5 and 6.—For tracts which possess no agency for collecting statistics, the figures are based on estimates. Of the total area (52,779,066 acres) entered in column 6 for 1914-15 for the Province of Agra, 45,368,066 acres are based on actual returns and 7,391,000 acres on estimates.

The variations in the areas shown in different years under the same item in the same province or district do not necessarily represent an actual increase or decrease on the area in question. In many cases a revised classification or the correction of a faulty estimate is responsible for the change.

Column 2—"Forests" mean "any land classed or administered as forest under any legal enactment dealing with forests." Any cultivated areas existing within such forests may be excluded and entered in column 6 (net area cropped). The forest areas do not agree in most cases with those stated in the reports on the administration of the Forest Department for various reasons, the chief amongst which are these: (1) because the forest administration reports and the statements of agricultural statistics relate in many cases to different periods, (2) because the administration reports relate exclusively to forests worked by the Forest Department, while the tables of agricultural statistics exhibit in addition forest areas administered by district officers, and (3) because, on the other hand, certain village lands worked, and returned as forests, by the Forest Department are not treated as forests in the returns of agricultural statistics and are therefore excluded from this column.

Column 3 includes all land absolutely barren, and also all land covered by buildings, water, roads, or otherwise appropriated to uses other than agriculture.

Column 4 includes groves not classed in the cropped area. Areas under bamboos and thatching grass, when not forming parts of forest areas, are included in this column.

Columns 8 to 13 state the area actually irrigated during the year, areas cropped more than once being counted once only.
Columns 14 to 18 state the gross area of irrigated crops, areas cropped more than once being counted as separate areas for each crop. The excess in some cases of the total area of crops irrigated (column 18) over the total area irrigated (column 13) is thus due to the inclusion in column 18 of the area irrigated at both harvests.

(a) Includes 1,700 acres in Rajshahi for which details are not available

(b) Includes 35,000 acres in Naini-Tal, Almora, and Garhwal for which details are not available

(c) Includes 26,777 acres in Purnea, and excludes certain other areas for which details are not available

(d) Includes 26,777 acres in Purnea for which details are not available

(e) Full details of all crops irrigated are not available

(a) Includes reserved and protected forests only. The management of the latter having been transferred to the revenue authorities, the figures shown in the forest administration report represent the areas of reserved forests, which slightly differ from those adopted for this table because the periods embraced are different.

(b) Includes unculturable Government waste and unculturable *banes*.

(c) States the estimated area of culturable Government waste.

(d) Shows (1) the estimated area of culturable *banes*, and (2) the difference between the net area cropped and the gross area of the actual holdings (exclusive of *banes*). It thus includes the unculturable lands within the actual holdings, the area of which cannot be ascertained.

Column 2.—Includes the area cultivated within forests, and excludes the area of forests in the Native State of Sandur, in Bellary, not included in the village papers. As the latter is included in the forest administration report, it accounts partly for the disagreement of its figures with those in this table.

Column 4.—Includes from 1911-12 areas occupied by *babul* and *casuarina* trees when they do not form parts of forest areas. Prior to 1911-12, such areas were classed under "Miscellaneous non-food crops" in Table III.

Column 5.—Includes all occupied waste, that is to say, waste portions of land for which revenue is paid.

Column 6.—Of the total net cropped area for 1914-15 (34,691,783 acres) stated in this column (page 60), 28,809,156 acres are based on actual returns, and 5,882,627 acres on estimates.

Column 10.—The term "tanks" refers to a particular kind of dammed reservoirs. These reservoirs are formed by throwing dams across the valleys of small rivulets and streams to intercept water during the rains.

Column 13.—Of the total area irrigated in 1914-15 (9,739,554 acres, page 61) 7,367,611 acres are based on actual returns and 2,371,943 acres on estimates.

NOTE.—Figures for unsurveyed villages are based on estimates.

Column 2.—Includes land administered by the Forest Department whether formally declared forest under an Act or not, and differs from the area stated in the forest reports, because in certain localities, where the settlement is incomplete, the original areas are still returned by the Forest Department, while revised areas are returned in this table; also because the revenue records do not always state the most recent revisions.

Column 3.—Includes all land recorded at the survey and settlement as unculturable, though at times a very small quantity of this land is cultivated.

Column 5.—The maximum period for which land thrown out of cultivation is reckoned as fallow is ten years.

Column 6.—Of the total net cropped area (25,711,156 acres) entered in this column for 1914-15 (page 64), 24,619,862 acres are based on actual returns, and 1,091,294 acres on estimates.

(a) Variations due to bad season.

Column 2.—The figures do not agree with those in the forest administration report, because the revenue records do not state the most recent alterations of area due to erosion by the Indus which the forest report does, and because, on the other hand, the forest report does not always exhibit the most recent alteration of area effected by the revision of survey, which the revenue records do

Column 6.—Of the total net cropped area (4,500,259 acres) entered in this column for 1914-15, 4,497,666 acres are based on actual returns and 2,593 acres on estimates

Column 2.—Includes forest areas administered by the district officers of some districts. Hence the figures do not agree with those in the forest administration report which exclude these areas. This column also includes the Siwalik Range in the Dehra-Dun district.

Column 5.—The maximum period for which land left untilled is reckoned as fallow is three years.

Column 6.—Of the total net cropped area (26,877,284 acres, page 74) entered in this column for 1914-15 for the Province of Agra, 26,273,284 acres are based on actual returns and 604,000 acres on estimates.

(a) Increase in current fallows is due to decrease in cropped area owing to drought.

Columns 8 to 13.—Government canals include private canals except in Naini Tal, for which district separate figures for private canals have been obtained. From 1903-04, however, the areas irrigated from certain private canals in Budaun and Basti, from 1907-08 such areas in Gorakhpur, and from 1911-12 those in Dehra-Dun, which were formerly included under "other sources," have been shown under the proper head "private canals." There are very few private canals in the United Provinces.

Column 13.—Of the total area irrigated (8,288,124 acres, page 75), in the Province of Agra in 1914-15, 8,252,224 acres are based on actual returns and 35,900 acres on estimates.

Column 2.—Includes all lands specially allotted to forest growth under the control of Government or any Local Board or Municipality

Column 3.—This column includes 23,680 acres of river beds in Gurgaon, 15,360 acres of mountain tracts in Simla, and 3,896,960 acres of mountain tracts in Kangra. These areas are not accounted for in the village papers, and the figures are based more or less on estimates

Column 4.—Includes large areas of Government waste not allotted for cultivation

Column 5.—The maximum period for which land is reckoned as fallow is two years; but, as a change in classification is not generally made until the year for quadriennial statements comes round, the old classification may be retained from one to three years longer than the prescribed period. In certain districts in the south-west of the province, however, the classification is amended annually

NOTE.—For tracts outside the surveyed area the figures are based on estimates framed in the best manner possible

Column 2.—The area entered in this column is that given in the forest administration report, and includes reserved forests and fuel reserves. From 1906-07 estimates of the forest areas in certain hill tracts have also been included. The forest areas in the Shan States, which are included in the Forest Administration Report, are excluded from this table, no returns of agricultural statistics being prepared for those States.

Column 3.—In settled tracts the unculturable area is taken from settlement registers, but in unsettled tracts it is obtained from the best source available.

Column 4.—Includes land thrown out of cultivation and abandoned. Groves, not classed in the cropped area, and bamboos, when not grown in forest areas, are also included in this column.

Column 5.—Includes only such land left uncultivated as is actually in possession of cultivators. In Lower Burma (excluding the Thayetmyo district) such lands are assessed at privileged rates, but in Upper Burma and in Thayetmyo no assessment is levied on and left uncultivated.

Column 2.—Shows the areas administered by the Forest Department; but the figures differ from those in the forest administration report, because the actual area of the forest is not known owing to incomplete survey, also because excisions made have not yet been taken note of in the forest registers, and because in many cases raiyatwari villages settled, theladari villages surveyed, clearance leased villages earned in proprietary rights, and villages purchased under the waste-land sale rules, have not as yet been finally disforested and struck off the forest registers. In the case of the Chanda, Drug, Raipur, and Bilaspur districts this column also includes all areas in the zamindars' estates which fall outside the surveyed villages of these estates. These areas are almost wholly under forest and include only a negligible proportion of sparse and shifting cultivation.

Column 3.—States areas covered with water, hill, or rock, and land occupied by buildings and roads.

Column 4.—States (1) the waste area within holdings (including fallows of more than three years), (2) land under tree forest which is not administered under any Act dealing with forests, (3) land under scrub jungle or grass, and (4) groves not included in holdings.

Column 5.—Land which has been fallow for not more than three years is reckoned as current fallow.

Column 2—The figures represent reserved forests, but exclude the areas of forest villages within the reserves which are entered under the appropriate heads of this table

Columns 3 and 4—The figures for unsurveyed tracts in Cachar and for permanently settled tracts in Sylhet are based on estimates. In the Assam Valley unsurveyed waste is divided into culturable and unculturable on the assumption that their proportion in the surveyed area holds good

Column 5—Includes generally all lands which are thrown out of cultivation or not cultivated, but which remain in the occupation of leaseholders. Figures for the Naga and the Lushai Hills are rough estimates

Column 6—The figures are obtained from the abstract crop statement for districts which have been cadastrally surveyed. The figures for the permanently settled estates of Sylhet and Goalpara and for the Hill districts are estimates

Column 2—Includes all lands specially allotted to forest growth under the control of Government or any Local Board or Municipality, and protected village waste in Hazara administered by the district officer and other waste lands in Peshawar

Column 4—Includes large areas of Government waste not allotted for cultivation

Column 5—The maximum period for which land is reckoned as fallow is two years; but, as a change in classification is not generally made until the year for quadrennial statements comes round, the old classification may be retained from one to three years longer than the prescribed period. In Dera Ismail Khan classification is amended according to area of each class of soil actually cultivated each year

This table shows the areas actually sown, whether the crop comes to maturity or not, except in cases when fields, owing to the failure of the first sowings, have been devoted to other crops: in such cases the area first sown is omitted. In cases where two or more crops are grown together, an estimate is made of the area covered by each, and the areas so estimated are separately returned. The estimate is made by the village accountant, or is subsequently determined on formulae prescribed by the provincial authorities.

The variations in the areas shown in different years under the same crop in the same district do not in all cases represent an actual increase or decrease in the area under that crop. In certain cases a revised classification or the correction of a faulty estimate is responsible for the change.

Column 10 (other food-grains including pulses).—Arhar (pigeon pea), baubati, lobia or chowli (asparagus), mung (green gram), kulthi (horse gram), urad (black gram), field gram, oheioh (job's tear), lentils, oheena (common millet), kangni (Italian millet), kodo or varagu, kutki, (little millet), kuhudi, peas, pigeon or bottle grass, swank or shama, chickling vetch, buck wheat, wadalu or batti

Column 28 (other dyes).—Arnatto, chayroot, divi-divi, henna, madder, morinda, safflower/saffron.

Column 31.—In certain cases, notably in Madras, the areas stated under "Tea" differ from those given in the special report on tea production published separately. The principal reason is that the special report is prepared from returns received from managers and owners of estates; and these returns, especially in Southern India, are in many cases inaccurate and defective. Minor discrepancies are also due to the fact that the figures in this table deal with the agricultural year; while those in the special report deal with the calendar year.

Column 35 (other drugs and narcotics).—Aloes, arecanut, sweet basil, betel-vine, country borage, bogoda brinjal or uela mulaka, dhatura, purple flea-bane, isfagul, kolinji or vempali, senna, soap nut, sweet flag.

The area sown with unimportant mixed crops, for which no separate heading is provided in the provincial crop statements, is assigned to the principal crop by the village accountant. The areas of important mixed crops, namely, wheat and barley, wheat and gram, barley and gram, jawar and arhar, bajra and arhar, and cotton and arhar, for which separate headings are provided in the crop statements, are distributed in accordance with prescribed formulae and entered under the crops of which they are composed.

Columns 3, 4, 5, 6, 9, and 10.—The whole of the area of the land planted with food-grains wheat, barley, etc., mixed with oilseeds is shown under food-grains in this table. The area shown under food-grains which was really planted with oilseeds (as a mixed crop) is roughly estimated to have been 3,970,000 acres in the whole of the United Provinces of Agra and Oudh in 1914-15.

Columns 12, 13, and 14.—The figures shown in these columns represent areas under "pure" oilseeds, i.e., oilseeds sown unmixed with any other crop. Besides these, the oilseeds are thinly sown in combination with wheat, barley, gram, and other crops. If the areas occupied by the scattered plants were added up, it is estimated very roughly that they would amount in 1914-15 (for the whole of the United Provinces of Agra and Oudh) to 620,000 acres of linseed, 1,000,000 acres of sesamum, and 2,350,000 acres of rapeseed.

No statistics are at present prepared by village or circle officers, except in the Sambalpur district. The figures for all other districts entered in this table are, therefore, merely estimates, except those for Patna, Gaya, Shahabad, Saran, Champaran, Muzaffarpur, Darbhanga, Monghyr, Bhagalpur, Purnea, Puri, Cuttack (exclusive of small permanently-settled areas), Balasore, Angul, the Santhal Parganas, Hazaribagh, Ranchi, and Singhbhum; the estimates for these districts are based on the figures collected during the cadastral survey.

In Cachar accurate statistics of the area under crops other than tea are available only for the cadastrally surveyed tracts, in Sylhet only for the Jaintia Parganas and Partabgarh, and in Goalpara only for the temporarily settled tracts. The figures for the permanently settled tracts in Sylhet and Goalpara and for the unsurveyed areas in Cachar are based on estimates. The figures for the five inner districts of the Assam valley represent the whole cropped area in these districts, with the exception of a small area.

(a) In Coorg the table is prepared quinquennially on a census taken every five years. The last census was taken in March 1915 by the circle sub-divisions, and the particulars entered in a register maintained under Rule 73 of the Rules framed under the Coorg Land and Revenue Regulation, 1899. Animals in municipal towns are included.

(b) An annual census is taken on the 15th March in Manpur

(c) The figures in columns 7 to 14 exclude Bengal (see table IV, No. 58)

(d) Statistics based on a census taken in 1913-14. Figures for columns 6, 11, 13 and 14 were revised in 1914-15.

(e) Included under "Donkeys"

Note.—Figures for 1912-13 are based on a cattle census taken in 1912; the figures for most of the districts, in columns 2 and 3 have, however, been revised since the publication of the previous issue of this volume. The census did not take into account the animals named in columns 7 to 11 nor ploughs and carts (columns 12 and 13). The figures for 1910-11 for the districts of the Presidency and Burdwan Divisions and for Darjeeling are based on estimates. The figures for 1907-10 for Faridpur are based on information collected during survey operations conducted in that district in the period mentioned.

Note.—A census is taken every five years in Government (naiyatwari) villages. The last quinquennial census was taken in 1914-15. In infirm villages, there is no suitable agency for the work, and Collectors obtain information for these villages as best they can; it is not known to what extent any census is made in them. Previous to 1909-10, no information was available regarding live-stock in permanently settled (zamindari) estates and in towns and cantonments which did not form part of any revenue village; but from that year statistics based on estimates are furnished for all these tracts.

(a) Constituted in 1910-11 out of the Cuddapah and North Arcot Districts

Note.—The figures are collected once in five years. The last quinquennial census was taken in 1909-10. All animals belonging to a family are entered against the name of the head of the family even though the animals are temporarily absent from the village. Animals belonging to other villages are excluded, and those belonging to a roving grazier who has no permanent residence are noted, but are not included in the village resources. The figures are regularly tested by circle inspectors (kanungoes). Stock statistics for the city of Bombay were collected for the first time in 1909-10.

Note.—The table is prepared quinquennially on a census in each district taken every five years. The last census, which was due in 1913-14 but could not be taken in that year owing to famine in some of the districts, was taken in 1914-15 in all the districts, except Amara, Gahwal, and the hill tracts of Naini Tal. In these latter districts the last census was taken in 1912.

Note.—The figures for 1909-10 to 1912-13 are only estimates received from time to time on the basis of settlement records or reports of police enquiries. The figures for 1913-14 shown in the table for all the districts of the Province, except Hazaribagh, Ranchi, Palaman, and Manbhum, were arrived at by a census of live-stock held in those districts towards the end of 1913. For Hazaribagh and Ranchi (excluding the area since transferred to Palaman in the case of the Ranchi District) the figures are based on information collected during survey operations; while the figures for Palaman and Manbhum are based on police reports.

Note.—The figures are collected annually, between the 1st January and the 15th March, by the patwaris in each village for the areas in + respective charges. The total figure is recorded in the tahsil by the kanungo in a village register. The patwari takes into account all animals including those temporarily sent elsewhere (e.g., for grazing), which belong to residents of the village, and excludes animals which are temporarily in the village for grazing or other purposes, but do not belong to residents. Stock in cities, large towns, cantonments, and in forest villages are included.

Note—A census is made annually by the village officers. All cattle belonging to one owner are entered against his name, even though the animals are temporarily absent from the village. When an owner cultivates land in more than one village, the actual number in each particular village on the night of enumeration is entered in the statement for that village. Cattle belonging to other villages, but temporarily in the village for grazing, are not entered in the statement for that village.

Note.—The statistics are based on a cattle census taken every five years. The census is, however, not taken simultaneously in the different districts. In the six districts of the Assam valley and in the central and eastern sections of the North-East Frontier district the last census was taken in 1916. In Cachar it was taken in 1912, in the Garo Hills (plains portion only) in 1913, and in the temporarily settled portion of Sylhet in 1910. No statistics are available for tracts other than Jaintia parganas in Sylhet, and for the hill tracts.

(a) For Jaintia Parganas only. The figures for 1904-05 include estimates for other tracts also, but such estimates are not available for 1909-10.

(b) No information.

Note.—The varieties of tenure are included, as far as possible, under one or other of the following heads, namely, (1) raiyatwari, (2) zamindari and village communities (temporarily settled), and (3) zamindari (permanently settled). Areas under forests are included under the prevailing tenure of the province. In the Central Provinces and Berar, however, areas under Government forests are shown separately.

Entry 2 (a).—Areas held revenue-free or at privileged rates are deducted, but the deduction need not be made where such areas are in any case less than an entire village, and where there is any difficulty in estimating the corresponding deduction to be made in the population (head 10). In Madras, Bombay, and Berar all land on which a full assessment has not been leviable during the year (for instance, assessed unoccupied land) is classed for the purposes of this head as "area not fully assessed." Area should not be entered under this head merely because the assessment due from them has been suspended or remitted on account of short crops, or for other special reasons.

Entry 3.—This head is subdivided into (a) total fully assessed area for which returns are available, and (b) area cultivated out of the area given in head (a). The latter head should be equal to the former after deducting current fallows and fully assessed waste, and should be either equal to or less than the net cropped area as shown in column 6 of Table II.

(S). The land revenue assessment necessarily differs from the land revenue collections which include collections on account of former balances and exclude so much of the assessment as has not been collected during the year.

† Includes 1,360,300 acres (in Dinajpur) for which details are not available

Entry 4.—Where the land revenue includes the zamindar's share, the net demand is entered, and the table states the payments due by the zamindars to Government, not those due by raiyats to the zamindars. The actual realisable demand on account of the year is entered after excluding arrears for past years. This column includes all the heads classed as "Land Revenue" in the Civil Accounts. The heads are:—(1) ordinary revenue comprising fixed collections, revenue from canals in Sind, fluctuating collections (including nazrana), over collections (Bombay), surplus collections, collections from Government estates, kyun tax (Burma); (2) sale of Government estates, (3) sale proceeds of waste lands, and redemption of land tax; (4) redemption of summary settlement cess; (5) meturpha (house tax) collections; (6) assessment of alienated lands less quit rent; (7) recoveries on account of survey and settlement charges (Bengal); (8) rents, etc., of fisheries; (9) receipts for the improvement of Government estates; (10) 12 per cent on collections from Government estates (Bengal); and (11) miscellaneous, comprising receipts on account of land registration fees, receipts from quarries and minor mineral products in forests and lands not under the management of the Forest Department, water mills rent, huceba tax (Sind), malikans or allowances to expropriated proprietors, fines and forfeitures of revenue Courts (except in Bengal and Assam), receipts under Madras Act II of 1864, capitation tax (Burma), petroleum well revenue, jado and amber revenue, thatlamada tax (Burma), receipts from ruby mines (Burma), recoveries in India of law charges in England on account of appeals from India, miscellaneous receipts, rents of railway class C land and rents of buildings situated on such lands.

Entry 5.—The population is that of the last general census.

The table is prepared quinquennially. The figures were last collected in 1913-14.

Column 3 (a)—In the case of raiyatwari tracts this column states the area of unoccupied assessed lands, of all unassessed ambols, of minor inam lands in Government villages held rent-free or subject to quit-rent, and of forest lands, excluding portions of the first mentioned two classes occupied under "miscellaneous," and in the case of zamindari tracts the areas of hills, porambocks, and minor inams entered. The entire area of whole inam villages is deducted in this column.

Column 3 (b)—Raiyatwari; includes the area of certain Agency tracts in Ganjam, Vizagapatam, and Godavari, and also the difference between the area by professional survey and the area according to village papers.

The figures for the raiyatwari tenures in this column are taken from village papers which differ in some cases from

Column 4 (a).—Raiyatwari; states the total occupied area as stated in village papers.

Column 4 (b).—For certain districts areas actually cultivated and for certain others estimates, or actuals supplemented by estimates shown in this column.

Column 5 includes all the items falling under the head "Land Revenue" in the Civil Accounts.

Column 8.—Shows only the "ordinary revenue," as defined in the Civil Accounts, on area fully assessed.

Column 10.—The cultivated area is, in the case of raiyatwari and zamindari lands, the net cropped area out of the area given in column 4 (a).

Column 11 states the entire population of raiyatwari and zamindari villages respectively.

Column 1.—Lands held under special tenures, such as talukdari, mehwasi, udhad-jamabandi, narvadari, and bhagdari in Gujarat, hoti and izafat in the Konkan, are classed as "zamindari and village communities (temporarily settled)".

Column 3 (a) includes alienated area and the area held free of revenue or the revenue of which has been reduced by special agreement, and the fully assessed unoccupied area.

Column 3 (b) includes land not available for cultivation or unassessed.

Column 4 includes land under temporary cultivation, also pôt lands paying full assessment.

Column 5 states ordinary and miscellaneous land revenue appearing in the Civil Accounts.

Column 10.—The incidence is calculated from the occupied area, which, in the Presidency proper, is treated as the cultivated area for the purposes of this table, and the assessment on that area.

Column 11 includes population of pot infans and the like scattered areas which cannot be distinguished from the population of the fully assessed area.

Column 12.—The incidence is based on the figures given in column 11 and those in column 8, plus the amount of full assessment on privileged lands held in fully assessed villages at less than that assessment.

No figures have been entered in columns 8 to 12 opposite "Lucknow, permanently settled," (page 303) as no portion of the permanent settled area has been fully assessed to land revenue.

Column 11 includes population of revenue-free lands when the area of such lands is less than an entire village. The inclusion does not materially affect the incidence entered in column 12.

Columns 13 and 14.—The figures are taken from the census reports of 1911.

For tracts outside the surveyed area the figures are mostly based on estimates framed in the best manner possible.

Column 1.—No areas are classed as zamindari, as no system of communal assessment prevails.

Column 3 (a) shows grants under Appendices I and II of the Rules under the Upper Burma Land and Revenue Regulation.

Column 3 (b) includes non-State lands in districts where no land revenue rates are yet imposed and where the *thathameda* rates have not yet been adjusted.

Column 4 (a) shows figures of State and non-State lands assessed to land revenue, including current fallows which are not assessed to land revenue. This column also includes the areas of waste land grants of which the rates have been fixed in perpetuity.

Column 5 states ordinary land revenue, *thathameda*, water rate, rents of fisheries, and items under "Miscellaneous Land Revenue," appearing in the Civil Accounts.

For tracts outside the surveyed area the figures are mostly based on estimates framed in the best manner possible.

Column 1.—No areas are now classed as *zamindari*, as no system of communal assessment prevails.

Column 3 (a) includes special grants which are not yet fully assessed.

Column 3 (b) includes old grants exempt from the payment of revenues under special terms.

Column 4 (a) states the areas of occupied lands, cultivated or left fallow; it also includes the areas of waste land grants of which the rates have been fixed in perpetuity.

Column 4 (b) excludes current fallows.

Column 5 shows ordinary land revenue, rents of fisheries, and the items under "Miscellaneous Land Revenue," appearing in the Civil Accounts.

Column 1—Zamindari (temporarily settled) includes malguzari and thekadari.

Column 2 states the area by village papers (column 6 of table I, No. 20).

Column 3(a)—Zamindari estates properly so-called (that is, excluding malguzari) are classed as not fully assessed.

Column 4(b) excludes fallows.

Column 5—The figures represent different items of land revenue for different districts, no uniform practice having been followed throughout the province.

-Column 1—Raiyatwari includes, besides raiyatwari tenures, all unsettled Government waste and forest lands and areas in which house-tax or poll-tax is levied; it also includes certain temporarily settled estates in Sylhet which were formerly (before 1902-03) included under Zamindari (temporarily settled). Zamindari (temporarily settled) includes, besides temporarily settled Zamindari estates, fee-simple grants, wholly or partially in revenue-free tenures, and grants under progressive assessment.

Column 5 includes all the items falling under the head "Land Revenue" in the Civil Accounts.

Notes—It is optional with local Governments to enter or omit transfers of lands held by tenants.

The entries under "by order of court" state not merely the transfers occasioned by debt, but all forms of transfer effected through the medium of a court. The word "court" in the entry "by order of court" should be held to include a revenue court.

Changes of entry due to succession, partitions, or simple mortgages, are not really transfers, and are excluded from the table, as also are redemptions of mortgage. All temporary transfers such as leases are also excluded, but mortgage with possession is treated as a transfer and entered in the table.

(a) The statement includes all legal transfers of property (1) by voluntary action of the owners and (2) by virtue of decrees of civil, and orders of revenue, comite. Transfers ordered by courts in cases of disputed succession, and those occasioned by debt incurred by the judgment-debtors, are included under the heading, "by order of court." This heading also includes transfers ordered by civil courts from registered holders to decree-holders, of lands sold by civil courts in satisfaction of decrees, and of holdings sold by the revenue authorities for arrears of revenue.

(b) Transfers of property in land are not permitted in Manpur, except by sale and that only under special conditions.

Note.—Only permanent transfers, as by sale or gift, are included, when the parties concerned apply for and obtain transfers of revenue registry. These are entered under "private contract or gift." Cases in which lands are sold for arrears of revenue due to Government are also included, if the lands are purchased by private parties, but excluded if the lands are purchased by Government. Transfers of tenant-right are not entered, the information not being available. The entry under the head "revenue-paying" includes raiyatwari holdings paying full assessment, and permanently-settled estates paying *peshkash*; and the entry under the head "wholly or partially revenue-free" relates to minor inams and whole inam villages. The table has been discontinued from 1913-14.

Note.—Transfers of property in land were not regularly registered in Upper Burma until 1st January 1914. The information is collected by revenue officers. The statement includes cases in which land has been permanently transferred by gift, sale, or other transactions, for valuable consideration. The term "court" includes a revenue office as well as a civil court.

Note—The information is obtained from the Registration Department. The table includes all transfers effected by sale of fields under decrees of a court (including a revenue court) either in execution of the decree or for recovery of arrears of land revenue. Private sales or recognised divisions of fields necessitating a change in the name of the registered occupant are entered under "by private contract or gift," as also are mortgages with possession. Transfers due to succession, by inheritance, simple mortgages, and leases are omitted.

APPENDICES

APPENDIX A

Average yield, in pounds per acre, of the principal cultivated crops, revised with reference to the results of experiments made up to the year 1911-12.

A provisional return of the yield of the principal crops cultivated in India was first compiled in 1892, from various statistical publications, such as, agricultural and settlement reports, crop forecasts, gazetteers, replies to the enquiries of the Famine Commission, etc., and to provide for the periodical revision of the estimates a system of experimental crop cuttings was prescribed by the Government of India, the results of which were to be reported in quinquennial returns.

The instructions for the preparation of these returns are that the estimate given should be that of the average outturn on average soil in a year of average character as deduced from a consideration of the information obtained on experiments made during the years under review; so that when multiplied by the average area cropped, it may give as near an approximation as possible to the outturn of the crop in an average year. The Agricultural Department of each Province has at its disposal a provisional estimate of the average yield of land of average quality (under the two major heads of irrigated and unirrigated land) for the several crops in each district. The object of the experiments annually made is to test the accuracy of these estimates, and to enable the head of the Agricultural Department in each province to revise his provincial estimates when necessary. Should it happen that the period has been one of unfavourable conditions which have affected the experiments reported, this would not necessarily involve the reduction of the standard estimates for the district or for the province, unless there were other reasons for thinking that, as estimates of yield in average years, they had been pitched too high.

As a result of the experiments made during the preceding quinquennium (1901-02 to 1906-07), considerable modification of the standard averages for several of the crops was made in all the provinces except Bombay and Bengal. Some three or four provinces have made a few revisions of this character on the results of the experiments conducted in the quinquennium 1907-08 to 1911-12; but, on the whole, the distrust in the results of the experiments as conducted by the district staff, to which expression was given by Bombay and Bengal on the last occasion, is growing. In the Bombay Presidency a system of more scientifically conducted experiments by officers of the Agricultural Department has been substituted for the system of experiments conducted by the district staff. In the Punjab and Sind the estimates framed by settlement officers at the time of revenue settlement have been preferred where these are available, while in certain other provinces the figures of the settlement officers have been freely referred to in checking the averages. In Bengal and Bihar and Orissa, although no change has been made in the system, the results of experiments made during the last twenty years have not been considered sufficiently reliable to justify any material change in the provisional estimates framed in 1892. In Burma the system has been condemned; but the provincial authorities do not consider any change feasible for the present. [Instructions have since been issued by the Government of India for improving these returns and employing the agency of the Agricultural Department for the investigation of average crop outturns as far as possible, in all provinces.]

The leading features in the different provinces are stated in the following paragraphs:—

Bengal.—Owing to the administrative changes of 1912, by which Bihar and Orissa have been formed into a separate province, certain crops, which are important in that area but hardly grown at all in Bengal as now constituted, have been omitted from the present report. The results of the experiments made in the quinquennium under review do not warrant any general conclusions as to the average yields of the various crops, nor do they, except in the case of rice, sugarcane, and jute, afford grounds for modifying the provisional estimates hitherto adopted by the Agricultural Department (which are practically a reproduction of the estimates of 1892). The average yield of winter rice has been reduced from 1,234 lbs to 983 lbs; on the other hand, the yield of sugarcane has been raised from 2,460 lbs to 2,905 lbs and that of jute from 1,200 lbs (3 bales) to 1,271 lbs (3·1 bales). In the consolidated tables for British India, the provisional estimates, therefore, continue to appear with these modifications in the statement of provincial averages, but in the detailed table the average outturn based upon the experiments of the quinquennial period under review is shown for each district.

Madras.—The experiments accepted as unobjectionable during the quinquennium were 3,385 in number as against 3,348 in the previous quinquennium. The average assessment of the plots of land selected for experiment is in excess of the average assessment of the province; in many cases, therefore, the land selected is apparently superior to average class of land. The yield of the majority of crops has been raised, especially in the case of cotton and irrigated jawar: the yield of irrigated cotton has been raised from 66 lbs to 87 lbs and of unirrigated cotton from 44 lbs to 55 lbs, and of irrigated jawar from 1,118 lbs to 1,370 lbs. The only decreases relate to sesamum and unirrigated rice. The reported yield of paddy (unhusked rice) has been reduced by 38 per cent to obtain the yield of rice (husked).

Bombay.—The estimates of 1897 were prepared with great care and the results of the experiments made in the two quinquennia ending 1901-02 and 1906-07 were not considered sufficiently reliable to justify any revision. With the sanction of the Government of India the system of crop cutting experiments conducted by the district staff was abolished in the quinquennium under review, and a system of more scientifically conducted experiments on Government farms by the officers of the Agricultural Department was substituted. But the results as yet obtained from the experiments on Government farms are too meagre to justify a general revision of the estimates. A few changes considered to be necessary by the Provincial Director have, however, been made with great caution in the figures for certain districts.

Sind.—In many cases figures taken from the previous report have been repeated, while in several instances figures have been taken from the settlement reports. Of the experiments selected as giving results typical of an average crop during the present quinquennium three were on wheat, one on jawar, two on bajra, one on gram, and one on cotton. As a result, the provincial average has been raised in the case of wheat, jawar, bajra, gram, rapeseed and cotton, while it has been reduced in the case of sesamum; the most important changes being the increase of the average yield of cotton from 308 lbs to 380 lbs, and that of bajra from 776 lbs to 971 lbs.

United Provinces.—The experiments made during the quinquennium under review have not necessitated any change in the provincial averages except for rice and maize. The yield of rice has been raised from 850 lbs to 900 lbs and that of maize from 1,050 lbs to 1,100 lbs.

Bihar and Orissa.—The present return relates to the province of Bihar and Orissa as constituted in 1912. Owing to carelessness in the selection of representative fields and to various other defects in the conduct of the experiments made in the quinquennium under review, the results arrived at do not afford any reliable information or justify any modification of the provisional estimates previously adopted by the Agricultural Department of the old province of Bengal on the basis of the estimates of 1892. In the consolidated tables for British India, these unrevised provisional estimates have therefore been retained in the statement of provincial averages, but in the detailed statement of district figures the average outturn based upon the experiments conducted during the quinquennium under review has been shown for each district, irrigated and unirrigated crops being classified separately.

Punjab.—The revisions of 1902 and 1907 were made on the basis of very unscientifically selected and inadequately supervised experiments carried out by the district staff without reference to the very careful estimates framed by the settlement officers at the time of revenue settlement. The present revision has been made in consultation with settlement officers in the case of districts of which the settlement is in the early stages, while in other cases the average yield has been worked out mainly from the areas and yields given in the assessment reports, and where the results differed materially from the yields fixed in 1907 without any change in agricultural conditions having taken place, the settlement officers' estimates have been preferred. There is no doubt that the yields now fixed, based as they are on the over-cautious estimates of settlement officers, are too low, but they are at any rate placed on a uniform basis. The result of the revision is a reduction of the yields of all the crops except rapeseed and sugarcane the averages for which have been raised. The most important changes are the reduction of the yield of bajra from 462 lbs to 379 lbs and of that of gram from 701 lbs to 549 lbs, and the increase of the yield of rapeseed from 251 lbs to 396 lbs.

Burma.—The number of experiments made in the quinquennium ending 1911-12 was on the whole larger than in the previous quinquennium, and, as in the past, the majority of the experiments were conducted by sub-divisional and township officers. The Provincial Director of Agriculture remarks that this arrangement is far from satisfactory, that the improvement of the system was considered, but that no change appears to be feasible for the present. In order to show the main product only, the following deductions have been made from the gross outturn of the crops, namely, for rice and jawar 33 per cent, and for cotton 70 per cent. The estimates of average outturn of rice, wheat, jawar, and gram have been lowered while those of cotton and sesamum have been raised. The figures for the bean crop now discriminate between *Pegyi* (*Dolichos lablab*) and *Pegya* (*Phaseolus lunatus*) which are the most important varieties exported.

Central Provinces and Berar.—Experiments have been selected with greater care in the present quinquennium than in the past, and due attention has been given to seasonal peculiarities and to classes of soil. The average yield has been raised in the case of rice, jawar, gram, linseed, and sugarcane, and lowered in the case of sesamum and cotton. In order to show the yield of the main product a deduction of 38 per cent has been made in the case of rice and of 70 per cent in the case of cotton.

Assam.—In the previous quinquennium figures for Assam were not shown separately, but they were combined with those for the districts of Eastern Bengal to give the average for the province of Eastern Bengal and Assam. The present return has been prepared for the province of Assam since its re-constitution on 1st April 1912. Detailed figures for each district are not available except for winter rice, rape and mustard, sugarcane, and cotton; these show a general increase over the previous estimates. In the case of cotton a deduction varying between 50 and 60 per cent has been made to obtain the yield of cleaned cotton. In almost all districts the number of experiments conducted during the period under review fell short of that made in any of the previous periods. The results, however, are stated to have been generally

reliable and to have tallied for the most part with the estimates made by settlement officers in some of the districts where important settlement operations were in progress.

North-West Frontier Province.—In the five years under review experiments were made by the district staff in only two districts, and the figures for those districts have been checked and modified where necessary on the basis of those experiments. For the other districts the averages previously adopted on the basis of estimates framed by settlement officers have been repeated. The Provincial averages have been raised slightly for all the crops except maize for which the figure has been reduced from 1,512 lbs to 1,292 lbs.

Ajmer-Merwara.—The figures reported appear to be merely averages of the results of the experiments conducted during the five years of the period without any consideration as to whether any of those years was of an average character or not. The yield of barley, maize, and cotton has been raised and that of jawar lowered, the most important change being the reduction of the yield of jawar from 424 lbs to 137 lbs. A reduction of 70 per cent has been made, as before, to obtain the yield of cleaned cotton.

Coorg.—The only experiments made have as usual been on rice. The average yield has been lowered from 1,507 lbs to 1,453 lbs, which is still very high in comparison with the reported yield of other provinces, but is ascribed partly to increased attention being paid to rice cultivation since the decline of the coffee industry and partly to the rice lands of Coorg being watered by hill streams which contain much manurial matter. [From experiments since made the average outturn comes to 1,316 lbs.]

Mysore.—The rainfall in the quinquennium under review is stated to have been generally erratic. The average yield of rice has been reduced from 879 lbs to 841 lbs, of sesamum from 215 lbs to 199 lbs, of sugarcane from 3,279 lbs to 3,138 lbs and of cotton from 89 lbs to 79 lbs, while that of ragi has been raised from 562 lbs to 581 lbs and of horse gram from 229 lbs to 257 lbs.

* The estimates for Bihar and Orissa are the standards, adopted provisionally by the Agricultural Department of the province, which are partly based on the information collected in 1892. The results of the experiments for the period ending 1911-12, regarded in Appendix A—No. 6, are not considered sufficiently reliable to justify a revision of the provisional estimates.
